It's easy. Just visit our website at **www.mysammy.com** and find out just how quickly you can discover the benefits MySammy can bring to your company.

About MySammy

MySammy LLC pioneered the Productivity Measurement Solution. It started as a software project for performance measurement for telecommuting employees working remotely. At the time, management experimented with the idea of allowing telecommuting employees to work from home through terminal server. To management's surprise there was no proper management software solution on the market to measure performance of telecommuting employees. A reliable management tool was needed to measure productivity for the company since managers weren't able to see employees face to face and feared employees becoming complacent. And simply blocking non-productive websites did not encourage productivity for the telecommuting employees. The key was to engage the users' time. Therefore management pioneered a Productivity Measurement Solution known as MySammy.

One of These Employees is a Superstar

But Who?

MY SAMMY™
The Productivity Measurement Solution

With MySammy, Now You'll Know

MySammy: The Productivity Measurement Solution

How can you determine accurately just who is your most productive employee? It's not easy, but now with MySammy you can tell just who is your superstar.

MySammy is software that helps companies of all sizes measure the computer activity and productivity of their employees.
MySammy can help you:

- Determine what employees are doing on their computer
- Set individual goals for each employee to constantly improve their productivity
- Empower employees to self-monitor their computer activities

### MySammy is a Perfect Compliment to Website Blocking and Monitoring

You may already be blocking but that's not enough. In recent years, website blocking and monitoring solutions have become less effective, especially in today's world of smartphone usage.

MySammy provides an affordable quantifiable measurement of a user's time on their work PC. It's great for employees both in the office, on the road, or telecommunicating. User activity is tracked for duration and applications used, and clearly graphed for easy evaluation. And because MySammy resides in the cloud, it's accessible by management anywhere.

The manager decides which websites or applications are considered as "non productive" without blocking. This can be done either system-wide or at the individual user level.

MySammy allows the user to optionally report their activities away from the computer such as when one is in a meeting.
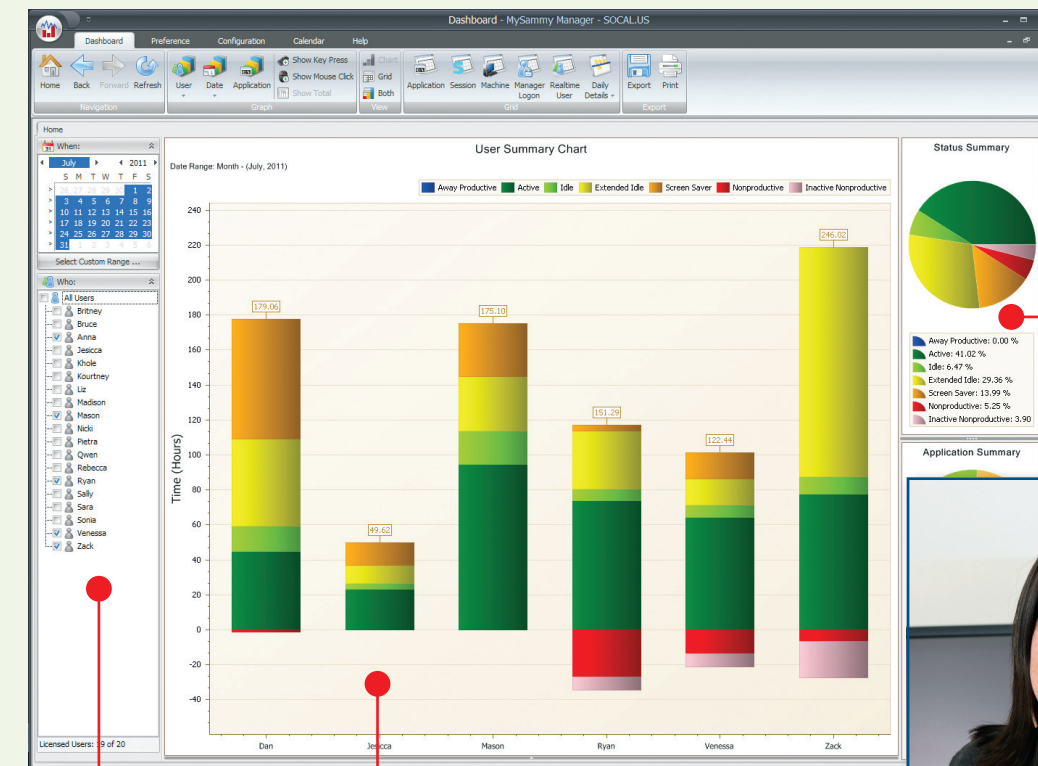

Safe and Secure—Private Too

MySammy does not collect sensitive data or screen shots. It collects a minimum amount of data for management evaluation and avoids depriving users' privacy.

Your data is always protected. Data is encrypted and securely transferred via SSL to MySammy servers.

Personal Mode

Management may choose to enable *Personal Mode* while running MySammy. This allows users to use their computers for personal purposes during their lunch hour without being flagged as non-productive, while still maintaining an audit record.

How It Works

Powerful Graphs and Reports
A multitude of administrative color coded graphs and charts are available to help you track your productive active, idle and non-productive activity. Track a user's day-by-day activity or analyze multiple users. With just a few clicks view application details for a selected time period or session data, and much more.

Achieve Set Goals
MySammy is a great tool for your employee's performance reviews. Non-productive computer activity (shown in Red) can be quickly and easily discussed. Helping your employees to move to more productive time in front of the computer (shown in Green).

User Analysis
Choose the users you'd like to display. You can easily choose to view all users, a few users or just one and MySammy will pull all user activity information, so you can get the entire picture easily. Users and groups can be analyzed side by side.

ANNA JAMISON: Accountant
Anna is the Superstar! But without MySammy you might never have realized that she is 18% more productive than anyone else in her department.

Overview

MySammy software encourages productivity by evaluating how a person spends time on a computer. User activity with duration and applications used are tracked for analysis and reporting. Pie charts and bar graphs give you the big picture quickly.
